Server: v2202512262656416143 · Generated: 2026-07-24T07:15:00+00:00

Scope: Server + WordPress

Sites: test1-656j

Summary

- **Verdict:** ALERT · 1 alert(s), 2 warning(s), 4 notice(s)
- **SSH** — root login via *password* from 175.41.162.81 (2x) — password root SSH is enabled; set PermitRootLogin prohibit-password + PasswordAuthentication no
- **Logs** — test1-656j: 2 HTTP 5xx response(s) in access log
- **SSH** — 3,102 failed/invalid SSH attempts (brute-force scanning) — no rate-limiting observed
- **WP Security** — test1-656j: DISALLOW_FILE_EDIT not set — dashboard code editor is active
- **WP Security** — test1-656j: default table prefix 'wp_' in use
- **WP Security** — test1-656j: 2 inactive plugin(s) installed — remove if unused
- **Plugins** — 2 plugin update(s) available across sites

Recommended Actions

1. **[ALERT] SSH** — root login via *password* from 175.41.162.81 (2x) — password root SSH is enabled; set PermitRootLogin prohibit-password + PasswordAuthentication no
2. **[warn] Logs** — test1-656j: 2 HTTP 5xx response(s) in access log
3. **[warn] SSH** — 3,102 failed/invalid SSH attempts (brute-force scanning) — no rate-limiting observed

1. Host Infrastructure

Disk

Filesystem	Size	Used	Avail	Use%	Mount
/dev/sda1	484G	9.2G	474G	2%	/

Root inode usage: 1%.

TLS Certificates

Domain	Issuer	Expires	Days left
test1-656j.1wp.site	Google Trust Services	2026-10-05	73

OS / Security Updates

- Applicable now: **0** (security: 0)
- ESM-only (Ubuntu Pro) security updates: 17
- Reboot required: no

2. WordPress Core Integrity

Site	Version	Checksums
test1-656j	7.0.2	verified

3. WordPress Security Audit

Site	Check	Status	Detail
test1-656j	wp-config-perms		wp-config.php mode 0o640
test1-656j	debug-display		WP_DEBUG_DISPLAY is off
test1-656j	file-edit		DISALLOW_FILE_EDIT not set — dashboard code editor is active
test1-656j	table-prefix		default table prefix 'wp_' in use
test1-656j	admin-user		1 admin account(s), none named 'admin'
test1-656j	https		site URL uses HTTPS
test1-656j	inactive-plugins		2 inactive plugin(s) installed — remove if unused

4. Plugins, Themes & Vulnerabilities

Available updates:

Site	Type	Name	Installed	Latest
test1-656j	plugin	fluentform	6.2.7	6.2.8
test1-656j	plugin	mailpoet	5.34.1	5.34.2

Vulnerability scan — 27 components vs wpvulnerability.net, CVEs cross-referenced with CISA KEV (1400 entries):

- **0 matching vulnerabilities, 0 CISA KEV** matches — all installed versions are newer than every known-vulnerable version.
- No public listing (custom/premium — verify manually): `wpcodex2` , `devkit` , `etch-theme`

5. Logs & Intrusion Scanning

- Web-server error log `test1-656j` : empty
- Access `test1-656j` : 1842 reqs; 2xx=1710, 4xx=40, 5xx=2

SSH auth.log

- Window: Jul 17 00:04 → Jul 24 07:10
- Invalid-user attempts: **3,044**; failed passwords: **58** (root: 23) — none successful.
- Accepted logins:
 - publickey for `root` from 13.229.188.242 ×84 (allowlisted)
 - password for `root` from 175.41.162.81 ×2
 - publickey for `tlowing` from 13.250.4.14 ×12 (allowlisted)
